Art Unit: 2829

1. Claims 1-19 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

It is not clear what is meant by the phrase "intelligent power semiconductor". All semiconductor devices utilize power in some manner and logic elements are said by some to be "intelligent".

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

3. (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
4. Claims 1-19 are, insofar as understood, rejected under 35 U.S.C. 102(b) as being fully anticipated by Whitmire et al.

Note figure 3 of Whitmire et al where a microprocessor senses a condition and outputs a signal that is positive, negative or otherwise to a display device. The display device is a multicolored LED 150 or 114.

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Art Unit: 2829

Graham, Hornung, Frantz, Mellott and Verkhovskiy are cited to show additional apparatus using anti-parallel LED display elements.
